

# CHANGING SUBJECT OF A FORMULA LINEAR

Answer all of these questions. Remember to show your working out in all questions.

## MAIN QUESTIONS

---

1.

$$2x + 5 = 13$$

$$\boxed{x = 4}$$

3.

$$3a + 2b = 12, \text{ make } a \text{ the subject}$$

$$\boxed{a = (12 - 2b)/3}$$

5.

$$2(p + 3) = 16$$

$$\boxed{p = 5}$$

7.

$$4x + 3y = 24, \text{ make } y \text{ the subject}$$

$$\boxed{y = (24 - 4x)/3}$$

2.

$$4y - 7 = 9$$

$$\boxed{y = 4}$$

4.

$$5m - 3n = 20, \text{ make } m \text{ the subject}$$

$$\boxed{m = (20 + 3n)/5}$$

6.

$$3(q - 4) + 2q = 23$$

$$\boxed{q = 7}$$

8.

$$2(3r - s) = 18, \text{ make } r \text{ the subject}$$

$$\boxed{r = (18 + 2s)/6}$$

## MASTER QUESTIONS

M1.

The formula for the perimeter of a rectangle is  $P = 2(l + w)$ . Make  $l$  the subject.

$$\boxed{l = P/2 - w}$$

M2.

The cost  $C$  of buying  $n$  items at £3 each with a £5 delivery charge is  $C = 3n +$

5. Make  $n$  the subject.

$$\boxed{n = (C - 5)/3}$$

M3.

A taxi charges £2.50 plus £1.80 per mile. The total cost  $T$  for  $m$  miles is  $T = 2.5 + 1.8m$ . Make  $m$  the subject.

$$m = (T - 2.5)/1.8$$

M4.

The area  $A$  of a triangle is  $A = \frac{1}{2}bh$ . Make  $h$  the subject.

$$h = 2A/b$$

M5.

The volume  $V$  of a cuboid is  $V = lwh$ . Make  $w$  the subject.

$$w = V/(lh)$$

M6.

The speed  $s$  of an object is  $s = d/t$  where  $d$  is distance and  $t$  is time. Make  $t$  the subject.

$$t = d/s$$

M7.

The cost  $C$  of hiring a car is £25 per day plus 15p per mile.  $C = 25d + 0.15m$  where  $d$  is days and  $m$  is miles. Make  $d$  the subject.

$$d = (C - 0.15m)/25$$

M8.

The temperature in Fahrenheit  $F = (9/5)C + 32$  where  $C$  is Celsius. Make  $C$  the subject.

$$C = 5(F - 32)/9$$

M9.

The profit  $P$  from selling  $n$  items at £8 each with costs of £3 per item and £50 overhead is  $P = 8n - 3n - 50$ . Make  $n$  the subject.

$$n = (P + 50)/5$$

M10.

The distance  $s$  travelled by an object with initial velocity  $u$ , acceleration  $a$  and time  $t$  is  $s = ut + \frac{1}{2}at^2$ . Make  $u$  the subject.

$$u = (s - \frac{1}{2}at^2)/t$$
